

LDC 2-9: Engineering Design Criteria

Abstract

In order to design a project correctly and as efficiently as possible, it's imperative your firm know and understand all criteria and guidelines which the project must meet. Completing this checklist assures that the design team has a full understanding of the jurisdictional requirements and criteria, thus eliminating costly re-design, additional plan checks and schedule delays. This criteria (including copies of links of current jurisdictional design manuals and standard drawings) should be gathered and distributed at the project kickoff meeting.
