

CASE Tool 9-1: A Guideline Addressing Coordination and Completeness of Structural Construction Documents

ABSTRACT

Welcome to the Tool No. 9-1, CASE RMP Tool Kit Committee's *A Guideline Addressing Coordination and Completeness of Structural Construction Documents*. The Tool Kit Committee has repackaged a previously released CASE document with upgrades and additions! A summary test and answer key have been added to the Appendix of the original document. It is recommended that engineers read this Guideline and take the test at the end of the document. More experienced engineers should then sit down with the engineers to go over the various subjects and answer any questions. The CASE Drawing Review Checklist will be a valuable tool to take away from this experience and implement into normal office use.
